Healthcare

The vast majority of healthcare organizations process and store protected health information (PHI) like medical history, Social Security numbers, and financial data. To comply with regulations like HIPAA, healthcare needs total cloud security.

While the adoption of single sign-on (SSO) is increasing, the use of this basic cloud security tool is not rising at the same rate as that of popular SaaS apps like Office 365 and G Suite. Organizations must use the appropriate security tools, such as SSO, at the same rate as SaaS applications if they want to protect data in the cloud.

CLOUD ADOPTION

	2018	2019
① Office 365	57%	79%
G Suite	25%	33%
SSO	23%	30%

COST PER BREACHED RECORD

TOTAL COST OF BREACHES

2017	\$1,794,300,720	5
2018	\$4,701,900,936	Š Š
2019	\$11,808,681,885	666

Hacking and IT Incidents (60.6%)

was the top breach cause in 2019, up from 45.8% in 2018.

CASBs provide dynamic detection and redaction of protected health information, encryption capabilities, and access controls, enabling healthcare organizations to achieve HIPAA compliance in the cloud and on mobile devices.
